## Professional Summary

DevOps Engineer with 2.8+ years of experience designing and managing CI/CD pipelines, cloud infrastructure, and automation frameworks across AWS, Azure, and GCP. Skilled in Infrastructure as Code, containerization (Docker, Kubernetes), and observability practices. Proven ability to improve deployment efficiency, reduce failures, and enhance system reliability through automation and monitoring. Experienced in integrating AI-driven solutions (GenAI, LangChain) into DevOps workflows to optimize incident management and operational intelligence.

## Education

*Bachelor of Science (Computer Science), Reva University*

2020 – 2023

8.07 CGPA

## Technical Skills

- **Cloud:** AWS, Azure, GCP
- **CI/CD & DevOps:** Jenkins, GitHub Actions, SonarQube, Nexus, JFrog, Bitbucket
- **Containers & Orchestration:** Docker, Kubernetes (GKE), Helm, Istio
- **Infrastructure & Automation:** Terraform, Ansible, Python, Shell/Bash
- **Monitoring & Observability:** Prometheus, Grafana, ELK Stack
- **AI/LLM:** LangChain, RAG, Vector DB, Prompt Engineering
- **Backend & APIs:** Python, FastAPI, REST APIs
- **Databases:** PostgreSQL, Elasticsearch

## Projects & Professional Experience

*DevOps Engineer, Kyndryl India*

Jul 2023 – present Bengaluru, India

- Designed and developed a GenAI-powered ChatOps assistant using LangChain, Retrieval-Augmented Generation (RAG), and vector database retrieval to analyze infrastructure logs and generate automated incident summaries; integrated monitoring APIs and deployed the service as a Docker container.
- Built LLM-driven AI agents using LangChain and agentic AI workflows to automate infrastructure query handling and incident analysis.
- Designed, implemented, and maintained **end-to-end CI/CD pipelines using Jenkins (Declarative & Scripted, Groovy)**, automating build, test, and deployment workflows across **multi-environment setups (Dev, QA, Staging, Production)**.
- Managed and optimized **cloud-based infrastructure (AWS, Azure, GCP)** focusing on **scalability, high availability, and cost efficiency**, aligning with DevOps and SRE best practices.
- Implemented **Infrastructure as Code (IaC) and configuration automation pipelines**, reducing environment drift and ensuring consistent provisioning across distributed systems.
- Built **Python and Shell-based automation frameworks** to orchestrate large-scale infrastructure operations (RHEL upgrades, validation pipelines), reducing manual intervention by **40%+**.
- Integrated **quality gates, security checks, and automated testing** into CI/CD pipelines using **SonarQube and artifact repositories (Nexus/JFrog)**.
- Engineered **observability and monitoring solutions** by implementing logging, metrics, alerts, and dashboards, improving system visibility and reducing false alerts by **30–35%**.
- Developed a **GenAI-powered ChatOps assistant (LangChain, RAG, vector DB)** to analyze logs and generate automated incident summaries, enhancing incident response efficiency.
- Deployed and managed **containerized microservices on Kubernetes (GKE)** using Helm and Istio, improving deployment consistency, scalability, and service observability.
- Supported **release management processes**, including versioning, environment promotion, rollback strategies, and deployment troubleshooting.
- Developed **API-driven backup validation systems** integrating enterprise backup platforms (Veeam, Rubrik, NetBackup), improving recovery validation speed by **50%**.
- Diagnosed and resolved **680+ critical incidents across 65,000+ servers**, performing RCA and reducing recurring failures by **40%**.
- Collaborated with development, QA, and operations teams to improve **deployment workflows, system reliability, and performance optimization**.
